Change a student’s life today!

Research shows that encouragement from an instructor or mentor makes all the difference in a student applying for an internship program, especially with underrepresented minority students. You can make a significant difference in the lives of your students just by taking the time to say: “Hey, I think you should apply to this program.” Please help them and help the marine technical industry broaden its participation by encouraging some of your promising students to APPLY TODAY!

The Marine Advanced Technology Education (MATE) Center coordinates the placement of motivated community college and university students (or recent graduates) in approximately 15 at-sea marine technical internships each year across the country and around the world. Most internships last 2-12 weeks and occur in the summer. All intern travel to/from the ship is covered and interns receive a $500/week stipend. The deadline for summer 2013 internships is March 25, 2013.

What type of students should you recommend?

▶ Students in marine technology, engineering, computer science, or other technical programs in community college or early in baccalaureate programs.

▶ Students with an interest in electronics, computers, and equipment.

▶ Students willing to try something new with their existing skills.

For more information, please contact Tami Lunsford, MATE’s Internship Coordinator at: tlunsford@marinetech.org (302) 731-3035
