Technical report		
Fuse shown in electrical schematics?		
Pneumatics or hydraulics used?		
See item 4.0		
Lasers used?		
If YES, see attached Laser Safety Sheet.		
2.0 Physical		
All items attached to ROV are secure and will not fall off.		
Hazardous items are identified and protection provided.		
•		
ALL Propellers are completely shrouded.		
No sharp edges or elements of ROV design that		
could cause injury to personnel or damage to		
pool surface.		
3.0 Electrical		
Single attachment point to power source.		
Standard male banana plugs to connect to		
MATE power source.		
25 amp single inline fuse or circuit breaker		
within 30cm of power supply attachment point.		
No exposed copper or bare wire.		
No exposed motors.		
Brushless motors are considered exposed unless		
electrically sealed after purchase.		
All wiring securely fastened and properly		
sealed*.		
Tether is properly secured at surface control		
point and at ROV.		
Any splices in tether are properly sealed*.		
Surface controls: All wiring and devices		
properly secured.		
Surface controls: All control elements are		
mounted with wiring inside an enclosure.		
*Properly sealed means that the wires cannot be		

thermoplastic tape. Male to male connectors are not

allowed.

The following is an example of a control board that would NOT pass the safety inspection.

### Problems include but are not limited to:

- 1. Does not have a single fuse to the power supply
- 2. Wires are loose. No method for securing wires leaving the control board.
- 3. Clip leads for attaching to power supply.
- 4. Electrical terminals are exposed on the fuse block and H-Bridges.

Any of the above items would cause this controller to fail safety inspection.

#### Corrections needed.

- 1. One power cord going from power supply to control box with inline fuse.
- 2. Power cord is physically attached to the control box to provide adequate strain relief.
- 3. Power cord has proper banana lead terminations (RANGER) or eye terminal (EXPLORER).
- 4. All electronics installed into a control box to shield the exposed electrical from inadvertent contact.
- 5. All wires leaving/entering the control box go through a connector to provide termination and strain relief.
