

The Marine Studies Department at the Canterbury School of Florida is seeking a Marine Science Education Intern for the summer of 2021. The Marine Science Education Intern will assist with various marine science camps for students in grades PK4 through Grade 8. The intern will lead students and campers in interactive learning experiences with touch tanks, a redfish aquaculture system, a laptop lab and an interactive Promethean. The intern will also assist with field trips to venues including local beaches and aquariums.

The intern will also help develop marine studies curriculum for students in PK3 through Grade 12. The curriculum will focus on all aspects of marine science and environmental education. Additionally, the intern will help maintain and care for the classroom, lab space and learning resources in the Cousteau Center for Marine Studies (CCMS).

The marine studies program features a kayak fleet, 23-foot Sea-Pro bay boat, and three aquarium touch tanks filled with crabs, sea stars, fish, shrimp and tunicates. The mission of the Marine Studies Department is to inspire an appreciation of the local marine environment and to promote responsible stewardship. The program aims to accomplish these goals by enhancing traditional science curriculum and focusing on inquiry-based marine science education.

- \* Undergraduate or graduate student majoring in marine science, environmental science, biology, or similar field with a valid drivers license and automotive insurance.
- \* Exhibits a positive attitude, is hard-working, and passionate about educating students about the marine environment. Capable of working independently and able to solve a wide variety of problems in the field.
